Customer Problem Statement

The Customer Problem Statement helps identify the user's needs, challenges and expectations. Understanding the customer's point of view enables the development of an AI-powered solution that accurately evaluates conceptual understanding through spoken explanations and provides meaningful feedback.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A student learning new concepts	Stay focused and understand lessons effectively	I often feel confused, stressed, or frustrated while studying	Existing learning systems do not recognize my emotional state or provide personalized support	Demotivated and less confident in my learning progress
PS-2	A teacher or trainer	Monitor students' emotions and provide timely support	It is difficult to identify every student's emotional state during learning	There is no automated AI system to detect emotions and recommend suitable learning assistance	Unable to provide personalized attention to all students
PS-3	An educational institution	Improve student engagement and learning outcomes	Traditional learning platforms only measure academic performance	They do not analyze students' emotional well-being or learning behavior	Difficulty identifying students who need additional support and improving overall learning effectiveness
